

TRINAR®

The color you spec is the color that stays.

TRINAR® is a high-performance fluoropolymer coating containing a minimum of 70% polyvinylidene fluoride (PVDF) resin. Its tough but flexible finish provides exceptional resistance to weathering effects such as fading and chalking making it ideal for exterior substrates such as roofs.

20 Years

Standard paint: significant fade, roof looks old, resale value goes down.

TRINAR®: minimal color change. Still like new.

30 Years

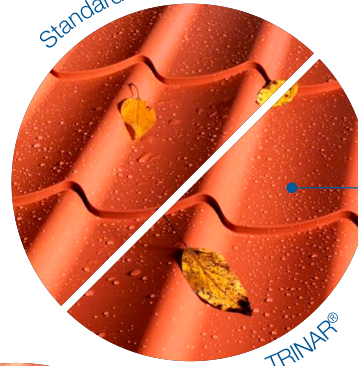

TRINAR® prevails. Minimal color change means money in energy savings and excellent resale value for the homeowner.
